

beans and peas

- Increases root number and mass
- Improves natural nutrient uptake
- Reduces effects of abiotic stress conditions
- Increases overall plant growth
- Increases number of pods per plant
- Increases seed weight, yields and returns

kelpak

Kelpak is a natural biostimulant manufactured from the brown kelp *Ecklonia maxima*, found on the west coast of South Africa. Produced using a cold cellular burst extraction method that preserves its delicate compounds, Kelpak significantly improves marketable yield and quality of beans and peas.

A global leader in seaweed products for over 47 years

kelpak.com

Kelpak applied pre-flower on peas, Argentina

16 independent statistical trials with Kelpak applied:

South Africa, Australia, Argentina, Poland and Canada

Kelpak significantly improved yields on dry beans, fresh peas and peas with an average increase of 21% across 16 trials

+21%

% Yield increase above standard grower practice

Recommended application rates:

Spray 2 - 3 L/ha between V6 and R1 growth stage

Maintain pH below 7
