

soybean

- Increases root number and mass
- Improves natural nutrient uptake
- Improves abiotic stress tolerance
- Increases overall plant growth
- Increases number of pods per plant
- Increases seed weight, yields and returns

Kelpak is a natural biostimulant manufactured from the brown kelp *Ecklonia maxima*, found on the west coast of South Africa. Produced using a cold cellular burst extraction method that preserves its delicate compounds, Kelpak significantly improves marketable yield and quality in soybean.

A global leader in seaweed products for over 47 years

kelpak.com

% Yield increase above standard grower practice – multiple trials and application combinations

Recommended Kelpak application timing and rates

Planting: Seed treatment

Apply with inoculant
at 5 L/ton of seed

Rate 5 L/ton of seed

Planting: In-furrow

Apply at 1 L/ha with planter
as an in-furrow spray

Rate 1 L/ha

Foliar: 3-leaf stage to first flower

Spray 2 - 3 L/ha between
V3 and R1 growth stages

Rate 2 - 3 L/ha

- Maintain pH below 7
- Kelpak can be used together with most agrochemical tank mixes

plant growth in harmony with nature
