

cucurbit crops

- Reduces transplant shock
- Increases vigour of root and shoot growth
- Larger and more fruit per plant
- Increases fruit sugar levels and shelf-life
- Higher returns per hectare

Kelpak is a natural biostimulant manufactured from the brown kelp *Ecklonia maxima*, found on the west coast of South Africa. Produced using a cold cellular burst extraction method that preserves its delicate compounds, Kelpak significantly improves marketable yield and quality in cucurbits.

A global leader in seaweed products for over 47 years

Recommended application rate

Seedlings: Dip the seedlings in seedling tray in 1% Kelpak or water trays directly before transplanting

Follow up with a 2 to 3 L/ha Kelpak foliar spray 14 days later and repeat the foliar spray after 14 – 21 days

Direct seeding: Apply Kelpak as a foliar spray at 2 to 3 L/ha at the 3 to 4-leaf stage and repeat the foliar application twice at 14 day intervals

The use of a standard surfactant is recommended, while the pH of the spray solution should be below 7
