

pistachios

- Reduces transplant shock in nursery trees
- Reduces abiotic stress
- Excellent pollen germination and pollen tube elongation
- Better nut set and retention
- Increases nut weight and yield
- Certified for use in organic crop production

kelpak

Kelpak is a natural biostimulant manufactured from the brown kelp *Ecklonia maxima*, found on the west coast of South Africa. Produced using a cold cellular burst extraction method that preserves its delicate compounds, Kelpak significantly improves marketable yield and quality in pistachios.

A global leader in seaweed products for over 47 years

kelpak.com

Pistachio nut yield

Variety female: Kerman | Male: Peters - Region Toledo, Spain (Year 2)

Recommended Kelpak application timing and rates

Full bloom

Spray 2 - 3 litres/hectare at full bloom

Rate 2 - 3 L/ha

Early nut development

Repeat 2 - 3 weeks after first application, during nut development

Rate 2 - 3 L/ha

Nut fill

Repeat 5 - 6 weeks after first application, at nut fill

Rate 2 - 3 L/ha

Nursery trees

Reduce transplant shock at orchard establishment. Apply at 2 litres/hectare after transplant

Rate 2 L/ha

When applied in a total spray volume of more than 1000 L/ha, maintain a minimum dilution rate of 0.5%.

Maintain pH below 7

Kelpak can be used together with most agrochemical tank mixes

plant growth in harmony with nature
