

maize

- Enhances uniform seedling growth
- Improves rooting
- Improves nutrient uptake
- Improves abiotic stress tolerance
- Reduces lodging
- Produces higher quality grain and yields

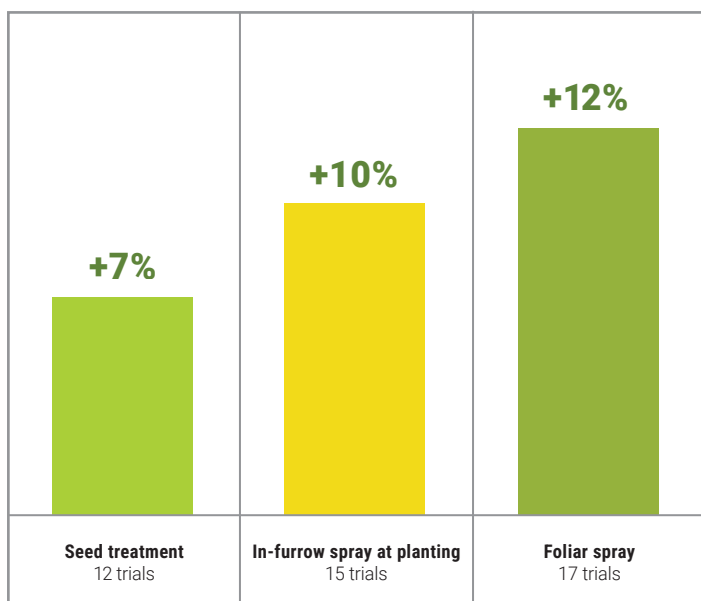

Kelpak is a natural biostimulant manufactured from the brown kelp *Ecklonia maxima*, found on the west coast of South Africa. Produced using a cold cellular burst extraction method that preserves its delicate compounds, Kelpak significantly improves marketable yield and quality in maize.

A global leader in seaweed products for over 47 years

kelpak.com

% Yield increase above standard grower practice

Kelpak improved yields by 10% across 44 independent trials

Trials conducted in South Africa, Brazil, Ukraine, USA and Poland, demonstrate the efficacy of Kelpak in improving maize quality and yield

+10%

Recommended Kelpak application timing and rates

Planting: Seed treatment

Apply at a rate of 5 L/ton of seed prior to planting

Rate 5 L/ton of seed

Planting: In-furrow

Apply at 1 L/ha with planter as an in-furrow spray

Rate 1 L/ha

Foliar: 4 to 5-leaf stage

2 L/ha foliar spray at 4 to 5-leaf stage

Rate 2 L/ha

For best results, apply Kelpak as a seed treatment or in-furrow application in combination with a foliar spray.
